
Brand Guide & Media Kit

Version 1.0 - built from approved Velora logo directions

The logo for Velora, featuring the word "Velora" in a bold, sans-serif typeface. The letter "V" is stylized with multiple parallel diagonal lines extending from its top and bottom strokes. Similarly, the letter "a" at the end of the word is also composed of these parallel diagonal lines, creating a sense of motion and a modern, architectural feel.

OVERVIEW

Brand Summary

Velora is positioned as a motion-native frontend platform for premium, cinematic interfaces built with modern HTML and CSS. The identity should feel browser-first, elegant, efficient and precise - never noisy or ornamental for its own sake.

Core brand idea: a premium interface engine where motion is structural, not decorative.

The visual system should express four qualities consistently: clarity, speed, continuity and control. The supplied logo direction already supports this by combining a bold geometric wordmark with directional linework that suggests flow, rendering paths and motion trajectories.

Premium by restraint	Neutral surfaces, disciplined spacing and confident typography.
Motion-native	Movement is embedded in the identity, UI and documentation language.
Browser-first	Clean semantics, modern CSS and high-performance rendering inform the brand tone.
Future-ready	The system should scale toward builder and AI-assisted workflows without losing clarity.

IDENTITY

Logo System

The primary wordmark is the hero asset. The standalone V monogram is the compact signature for favicons, avatars, app icons and social profile surfaces.

**Primary wordmark**

Use for website hero, docs masthead, press sheets and deck covers.

**Monogram**

Use when space is constrained or the brand is already established in context.

Recommended usage rules

- Prefer the wordmark on warm light canvas or pure black/white fields.
- Use the monogram for favicon, social avatars, app switchers and minimal badges.
- Do not distort, rotate, add shadows or place the logo on visually busy imagery.
- Keep the striped motion lines intact; they are part of the trademark silhouette.

SPECIFICATIONS

Clear Space & Minimum Sizes

Because the striped linework is a critical recognition device, the logo needs generous breathing room. Use the stem width of the monogram V as the core spacing unit.

Clear space	Minimum clear space on all sides: 1x, where x = approximate width of one monogram stem.
Minimum print size	Wordmark: 30 mm wide. Monogram: 10 mm wide.
Minimum digital size	Wordmark: 160 px wide. Monogram: 32 px wide.
Small-size fallback	Below the minimum size, use the solid monogram only if line detail becomes unreadable in future derivatives.

For product surfaces, allow more than the minimum whenever possible. Velora should look spacious, deliberate and premium.

PALETTE

Color System

The approved core palette is derived directly from the provided logo artwork: a warm light canvas paired with deep black ink. Support colors below are recommended extensions for UI states, motion cues and presentation graphics.

Name	Hex	Use
Primary Background	#E3E3CD	Warm light canvas extracted from supplied logo artwork
	#050505	High-contrast brand mark / typographic foreground
Support Dark	#111111	Recommended dark UI surface for dark-mode use
Support Blue	#5C6AC4	Recommended motion/UI accent for states and callouts
Support Violet	#7C3AED	Recommended premium accent for gradients and transitions

Color strategy

Use the warm canvas as the default editorial and presentation background. Reserve black for typography, outlines and brand marks. Blue and violet should appear as controlled accents in motion demos, callouts, active states and gradients, not as dominant backgrounds.

TYPE

Typography Direction

The current logo suggests a geometric sans-serif ecosystem. The type system should stay modern, neutral and technical enough for documentation, while still feeling premium for marketing.

Role	Recommended family	Why
Display / headlines	Space Grotesk, Sora or Plus Jakarta Sans	Crisp modern geometry that pairs with the wordmark.
Body / UI	Inter or Manrope	Readable at small sizes and stable across docs, product UI and site content.
Code / tokens	JetBrains Mono or IBM Plex Mono	For code samples, token tables and implementation notes.

Heading rhythm should be assertive and spacious. Body copy should remain calm, legible and compact enough for technical content.

EXPERIENCE

Motion Principles

Velora is explicitly motion-native. Brand motion should reflect continuity, layered progression and fast browser-native polish rather than flashy spectacle.

Continuity	Transitions should feel like one surface evolving into the next.
Precision	Animation timing must feel engineered, not decorative or random.
Depth with restraint	Use subtle scale, reveal and perspective cues instead of overblown movement.
Performance-led	Motion should reinforce speed and 120 fps smoothness.

Recommended motion tokens for branded communication

- Fast interactions: 160-220 ms
- Standard transitions: 280-420 ms
- Hero / page handoff: 420-560 ms
- Primary easing: cinematic cubic-bezier curves with soft deceleration
- Signature visual language: line sweeps, mask reveals, shared-element continuity and subtle parallax

EDITORIAL

Brand Voice & Messaging

The written voice should match the product: direct, modern, assured and technically literate. Velora should sound like a system for serious frontend craft, not a trendy visual gimmick.

Tone	Confident, exact, concise.
Keywords to lean into	motion-native, browser-first, cinematic, premium, semantic, performant, native transitions, modern CSS.
Avoid	Buzzword-heavy AI hype, vague futurism, overclaiming or overly playful copy.
Tagline	A motion-native frontend platform for expressive websites and app interfaces.

APPLICATIONS

Product UI Direction

The brand should translate naturally into the framework UI, documentation and marketing site. That means neutral foundations, strong typographic hierarchy, subtle depth and well-controlled accent motion.

Documentation	Light canvas backgrounds, crisp tables, restrained dividers and selective accent gradients.
Marketing pages	Use the wordmark prominently, oversized headlines and line-based motion overlays.
Dashboard shells	Prefer dark surfaces with light typography, using blue/violet only for state or emphasis.
Social / launch cards	Use the monogram as a brand seal with plenty of negative space.

When in doubt, choose restraint over decoration. Velora should feel expensive because it is clean, intentional and technically sharp.

PRESS

Media Kit Essentials

This page lists the baseline assets and metadata that should accompany any launch, press outreach, partner deck or marketplace profile.

Company / product name	Velora
Descriptor	Motion-native frontend platform
Short boilerplate	Velora helps teams build premium, cinematic interfaces using modern HTML, CSS and browser-native transitions with minimal JavaScript.
Primary website	Add when public domain is finalized
Repository	GitHub monorepo with packages/css, docs and playground
Preferred logos	Wordmark on light canvas, monogram for avatars and compact uses
Suggested screenshots	Docs homepage, hero demo, motion scene, dashboard shell, transition demo
Founder / team contact	Add official press contact and social handles

GOVERNANCE

Do / Don't

A consistent identity is critical while the product matures. Keep the logo disciplined and the brand system minimal.

Do	Do not
- Use generous whitespace and clean layout structure. - Keep backgrounds simple when presenting the logo. - Express motion through line, reveal and continuity motifs. - Align product messaging with performance, semantics and premium execution.	- Do not stretch or recolor the logo arbitrarily. - Do not place the striped linework over busy photo backgrounds. - Do not overuse gradients or neon accents. - Do not make the identity feel playful, noisy or cartoonish.

ROADMAP

Next Assets to Produce

To complete the operational brand system, the following outputs should be prepared next.

- Vector master files for wordmark and monogram (SVG, PDF, monochrome variants).
- Official favicon/app icon package at 16, 32, 48, 180, 192 and 512 px.
- Social preview kit for X, LinkedIn, Product Hunt and GitHub.
- Docs/website component library with branded buttons, cards, code blocks and callouts.
- Launch deck template and one-page company overview.
- Motion spec snippets for logo intro, hero reveal and page transition signatures.

Prepared from the approved Velora logo exploration and project strategy documents.
