

Velora / Design System v2

A more complex, usability-driven brand system

Refined to fit the new wordmark direction: warmer neutrals, graphite contrast, muted olive gradients, and a more editorial product voice.

Usability-first

Brand-aligned gradients

Revised typography

Design intent

Premium, cinematic, calm, exact, browser-native.

System principle

Depth through spacing, motion and tone before chroma.

Designing for premium usability, not only branding

The revised system still aligns with Velora’s thesis: a motion-native frontend platform centered on semantic HTML, modern CSS, layered motion, and premium browser-native experiences.

New font direction for a stronger product voice

Display family

Noto Sans Display

Use for page titles, hero headlines, section statements, spec markers, and numeric showcases.

Interface family

Lato

Use for UI labels, body copy, controls, docs, navigation, and dense information surfaces.

Type scale and usage

Display / 56	Hero headlines, launch pages, key brand moments
Display / 32	Section titles, showcase cards, keynote statements
UI / 20	Component titles, dashboard headers
UI / 16	Recommendation: Keep display usage sparse. The logo already carries distinctive character; the interface should feel disciplined and calm around it. Navigation, buttons, tabs, forms
Body / 14	Default readable app and doc text
Meta / 12	Captions, annotations, helper labels

A gradient palette closer to the brand identity

Canvas

#E3E3CD

Primary background

Mist

#F3F2E6

Elevated surfaces

Stone

#C8C9B0

Soft borders / fills

Olive

#A9B08B

Primary brand accent

Moss

#7F8668

Interaction hover / active

Deep Olive

#5C604C

Structural dark accent

Graphite

#232321

Text, dark surfaces

Ink

#0A0A0A

Maximum contrast

Deep Motion
#C8C9B0 / #A9B08B / #5C604C / #232321

Olive Drift
#E3E3CD / #C8C9B0 / #A9B08B / #F3F2E6

Canvas Beam
#F3F2E6 / #E3E3CD / #C8C9B0 / #A9B08B

Gradient rule:
Use gradients as atmosphere, not brand noise. Keep low saturation, broad transitions and limited chroma steps so the identity remains calm and premium.

Spacing

4 / micro
8 / control gap
12 / compact panel
16 / default block
24 / section gap
40 / hero cadence

Radius

10 / inputs
16 / cards
22 / large panels
999 / pills

Elevation

1 / flat
2 / hover
3 / overlay
4 / modal

Stroke

1px / soft
1.5px / focus
2px / strong dividers

Control anatomy

Your project name

Launch scene

Preview

Large radii, calm contrast, and restrained gradients create premium usability. This is especially important for docs, builders, settings pages and dashboard shells.

More complex UI still disciplined

Panel card

Panel card title hierarchy, top metadata, concise actions, and generous inner padding.

Builder Scene

Timeline editing / no-code orchestration

Form field pattern

Project mode

Motion density

Theme

Navigation and information rhythm

Overview

Scenes

Tokens

Motion

For this product category, complexity should come from layered information architecture: tabs, sticky context, split panels, inspectors, previews, and subtle status colors. Avoid over-decorated components.

Primary motion behaviors

Line sweep	Mask or border reveal moving with diagonal logic similar to the V strokes.
Panel glide	Short X/Y shifts for surfaces, drawers, tabs, and route transitions.
Depth fade	Opacity + slight blur + small scale for premium entry, never aggressive zoom.
Scroll handoff	Section continuity using progressive reveal and view transitions.

Motion scale

Fast / 160ms
Base / 240ms
Cinematic / 420ms

Interaction guidance

Hover lift $\leq 4\text{px}$
Use easing that settles gently
Respect reduced-motion modes by default

- Default body text 14–16px with relaxed line-height.
- Primary actions always exceed 44px touch height in real products.
- Dark text on ivory surfaces is the default content mode.
- Olive tones support hierarchy but should not replace contrast.
- Focus rings use warm olive or graphite at clear thickness.
- Dense dashboards must rely on spacing and grouping before color.
- Gradients stay behind content, never underneath long-form reading text.
- Use reduced-motion fallbacks for scroll and route choreography.

This fits Velora's positioning around expressive interfaces with lower runtime cost and better accessibility than JS-heavy frontend stacks.

```
:root {  
  --vl-bg-canvas: #E3E3CD;  
  --vl-bg-elevated: #F3F2E6;  
  --vl-line-soft: #BFC1AA;  
  --vl-accent-olive: #A9B08B;  
  --vl-accent-moss: #7F8668;  
  --vl-accent-deep: #5C604C;  
  --vl-text-primary: #0A0A0A;  
  --vl-text-secondary: #232321;
